EXPERIENCE

Full-Stack Next.js Project

SaaS (Amanat / Tader)

📅 Apr 2026 – Jul 2026

- **Offline-First Architecture:** Built a local data caching layer using IndexedDB (Dexie.js) and Service Workers, enabling offline dashboard access and localized Arabic fuzzy search.
- **Port storage fee engine:** Architected a complex invoice calculator for 20/40 ft shipping containers, integrating tier-based rates, surcharges (hazardous/reefer), taxes, and dynamic exchange rates.
- **Real-Time Push Notifications:** Integrated a background update system using Web Push APIs to instantly notify clients of account balance alterations, including support for iOS standalone PWAs.
- **Admin Dashboards & Systems:** Created dashboard tools for high-volume Excel/JSON data imports, visitor telemetry logging, and installation status tracking.
- **Security & Session state:** Implemented secure JWT session persistence and role-based client/admin authentication to protect critical financial logs and calculation attempts.

Contract

ERP System

📅 Jan 2026 – Apr 2026

- **Architected and built a Progressive Web App (PWA)** business management system that operates fully offline, enabling uninterrupted workflows in low-connectivity environments.
- **Implemented a role-based authentication and authorization system** with protected routes, session persistence, and granular permission controls using JWT.
- **Configured Service Workers and the Cache API** to synchronize local data with the server upon reconnection, ensuring zero data loss during offline sessions.
- **Designed a modular component library** with Tailwind CSS, delivering a responsive and accessible interface across desktop and mobile devices.
- **Optimised initial load performance** through code-splitting and lazy loading, achieving sub-3 s first contentful paint on mid-range devices.

Full-Stack Next.js Project

E-Commerce Platform

📅 Feb 2025 – Dec 2025

- **Delivered two iterations** of a full-featured e-commerce platform, evolving the stack from Firebase (v1) to MongoDB + Next.js (v2), demonstrating clear architectural growth over the engagement.
- **Built end-to-end shopping flows** including dynamic product catalogue with advanced filtering, persistent cart, wishlist, and checkout with integrated payment processing.

TECHNICAL SKILLS

Core Languages

JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks & Libraries

React.js, Next.js, Tailwind CSS, Zustand, React Query

Backend & APIs

Node.js (Express basics), REST API integration, Axios, JWT Authentication, Firebase

Databases & Services

MongoDB, Firebase Firestore, NAVIS integration

Progressive Web Apps

Service Workers, offline-first architecture, Web App Manifest, Cache API

Tooling & Workflow

Git & GitHub, Vercel, npm, Webpack, Vite, ESLint, Prettier

Design Handoff

Figma → code (pixel-perfect implementation), Responsive & accessible UI

Performance

Code splitting, lazy loading, memoisation, Lighthouse optimization

EDUCATION

Bachelor of Commerce

Al-Azhar University

📅 2020

COURSES

Advanced React & Next.js

Scalable, production-ready web applications — App Router, RSC, streaming, caching strategies.

JavaScript (ES6+) & Modern Web Development

Closures, async/await, Promises, module bundling, and the event loop in depth.

Frontend Performance Optimisation

Code splitting, tree shaking, memoisation, web vitals (LCP, FID, CLS), and Lighthouse audits.

- Implemented secure user authentication using JWT and Next.js middleware for server-side route protection, plus OAuth social login (v2).
- Developed a full admin dashboard for product, order, and user management with real-time analytics powered by Firebase / MongoDB Atlas.
- Leveraged Next.js App Router with server components and streaming to reduce client-side JS bundle by ~35% and improve Time to First Byte.
- Integrated Stripe-compatible payment gateway with webhook handling for order lifecycle events.

- **UI Development with Tailwind CSS**
Utility-first design, responsive breakpoints, dark mode, accessibility patterns (WCAG 2.1).
- **Git & GitHub – Collaborative Version Control**
CI/CD (GitHub Actions basics), Deployment pipelines, Vercel, Railway (basic).
- **Databases ORMs**
MongoDB, Firebase Firestore, PostgreSQL, Prisma ORM.

Client Project

DCHC Billing Portal

📅 Jul 2025 – Sep 2025

- Built a secure, client-facing billing portal with role-based JWT authentication, ensuring sensitive financial data is accessible only to authorised users.
- Integrated with the NAVIS shipping platform via REST API to pull real-time container and shipment data into the billing workflow.
- Engineered an Arabic-language PDF invoice generator using jsPDF/PDFMake with RTL text rendering and custom branding, removing a manual process entirely.
- Implemented end-to-end form validation, error boundaries, and user-friendly feedback states, reducing support queries related to data entry errors.

PROFESSIONAL SUMMARY

Frontend Engineer with hands-on experience building scalable SaaS applications using React, Next.js, and TypeScript. Passionate about creating clean, accessible, and maintainable user interfaces while collaborating closely with backend developers and product teams. Experienced in API integration, offline-first PWAs, and delivering production-ready features from concept to deployment.
